

SIMPLY BRILLIANT

Touché Lighting Control develops innovative technologies that focus on simplicity. We build lighting controls that have enhanced features that allow users to intuitively install and manage their environment through a mobile app running on a smartphone or tablet device. We understand that a lighting control solution should just work — a system that is efficiently designed, easily installed, and simply operated.

Touché
LIGHTING CONTROL

At Touché Lighting Control, we take a different approach to your control needs. We believe whether you're a specifier, an installer, or a facility manager — from start to finish — the installation and implementation process should be intuitive for everyone involved. This is our core vision and passion. Touché's innovative engineering approach continues to drive and influence the development of our products.

» Simple

At Touché, we believe that simplicity represents creative ideas, along with intelligent thinking. This is reflected by our **multi-functional devices** and our **efficient system architecture**. The bottom line: being simple to design, install, and use — all result in significant up-front and ongoing cost savings.

» Scalable

Whether you're controlling a room, a floor, or an entire building, **the unique building-block architecture** of our solution eliminates the frustration experienced with competitors' systems. Specification, installation, and management of the Touché Lighting Control solution is hassle free.

» Software-driven

Our cutting-edge software-based technology provides users, regardless of technical background, with a **self-configuring** and **intuitive** control solution. Plug it together, and it just works; but should system adjustments be desired, our simple and free app provides any user a convenient and easy-to-use interface.

STAND-ALONE ROOM CONTROL

Smart Sensor

- Combination dual-technology occupancy and daylight sensor.

Color Wall Station

- Color touchscreen is one of several wall station options.
- Multiple touchscreen configurations are available via AP.

Room Manager

- Capable of controlling up to (16) 0-10V fully rated lighting channels.
- Configuration app is Bluetooth® compatible.
- Easy installation with out-of-the-box functionality.
- Plug-load listed.

CAT-5

- All control wiring is simple CAT-5 cabling.

NETWORK ROOM CONTROLS

Networking your Touché Lighting Control system is quick and easy — just connect with CAT-5 wiring. All Room Managers are network capable without adding unnecessary hubs or gateways.

Most manufacturers tout the features of their systems. The trouble with those features is how they are implemented. Many times, system components are **made** to work together, not **designed** to work together to meet the requirements of the feature. At Touché, our solution was designed from the ground up with a software-based model to meet today's and tomorrow's feature needs.

Benefits of Using Touché Lighting Control

A Simple Solution = Powerful Features

When you reduce the cost and complexity of a project, in most cases, you get a reduction of features. For Touché, this **reduction in cost and complexity** results in **full functionality and features**. All the devices that make up Touché's solutions are designed to work together, and they can be configured through simple user interfaces. Below is a list of just some of today's complex lighting control needs that are supported by Touché:

- Occupancy/Vacancy Sensing
- Daylight Harvesting
- Field-Configured Wall Controls
- DMX Architectural Control
- Room Partitioning
- Color Tuning
- Circadian Rhythm/Diurnal Scheduling
- Stand-Alone & Networked Control
- Audio-Video Integration
- Motorized Shade Control
- Astronomical Time Clock
- Unlimited Building Schedules
- Integration with Third-Party Systems (Security/Fire Alarm)

Simply Brilliant

Sometimes the biggest challenge in setting up your lighting control system is determining what you want the system to do. Touché makes that simple – plug the components together, and the system will start working right out of the box. Touché's **Smart Connect** technology determines the best configuration for the components connected. If a different configuration is desired, then that is easy, too – a free and intuitive smartphone app allows you to connect via **Bluetooth®** to any Room Manager for simple configuration changes.

THE CHALLENGE

We understand that all customer and facility lighting control needs are not the same, but that should not require numerous systems to carry out those needs. Lighting control is based on three fundamental concepts:

- Lights need to be turned on, off, or dimmed to meet environmental conditions, user preferences, and energy code requirements.
- Manual interfaces like wall stations and switches are required for user interaction with the lighting control system.
- Automatic control from sensors, time-clock schedules, and overrides are essential for energy conservation and system coordination.

The needs of a retail shop are quite different than the needs of a hotel, hospital, or convention center, but they all retain these three fundamental concepts. So why do lighting control manufacturers require so many different solutions, and how does Touché solve this with one common solution?

THE COMPETITION:

Multiple Needs = Multiple Solutions

Other manufacturers have created solutions to individual application problems by one of two approaches. Either they acquire companies with different systems and add those to their product offerings, or they retain legacy systems to meet individual challenges and develop new solutions to new problems as needs evolve.

This results in complex and uncoordinated solutions, high SKU system counts, and bloated costs.

Complex Is Frustrating!

TOUCHÉ:

Multiple Needs = Single Solution

Touché has taken a new and unique approach to lighting control. While maintaining the three fundamental concepts, all system components and features are backward compatible and forward expandable. This is done through flexible software and intelligent engineering.

The same core components in the Touché solution are used to control a convention center as are used in a small restaurant, elementary school, or office building.

Simple Is Brilliant!

Our Number One Priority Is You

We are the only lighting control manufacturer that provides **Free Lifetime Technical Support** with every one of our solutions. We can do this because of the exceptional quality of our products — we test every component before it leaves our Fort Wayne, Indiana, factory — which is BAA-compliant. Our team is fully committed to ensuring that you are completely satisfied with your Touché Lighting Control solution.

Online Knowledge Center

Knowledge is power. Our website provides helpful resources and tools to assist you with your lighting control needs. Whether you're designing, installing, or maintaining a facility — our **online videos** and **knowledge base** will provide you with the information you need to complete and manage your project. To learn more, go to ToucheControls.com.

Design with an Expert

Touché has **local experts** ready to review your project's requirements and to help you manage the design and purchase process. These experts possess an in-depth knowledge of lighting control concepts, Touché capabilities, and local **energy codes** and will work closely with you to achieve a successful project. Start a conversation by going to ToucheControls.com.

Remote Start-Up

Because Touché solutions utilize **state-of-the-art** technologies, most Touché projects can begin remotely — avoiding the costs and time constraints of on-site start-ups as required by many other manufactures. For those who prefer in-person assistance, on-site start-up is available from Touché at a reasonable price.

DirectConnect Support

If you need help making system adjustments, obtaining optional free software updates, or troubleshooting, we can **remotely connect** through your phone, tablet, or PC with DirectConnect. It's **quick and easy** and helps ensure mutual understanding and efficient resolution by letting us see what you see. Help is just a click away at ToucheControls.com.
